SINGLE TREE OBJECT DETECTION

GEORG-AUGUST-UNIVERSITÄT GÖTTINGEN IN PUBLICA COMMODA SEIT 1737
ABTEILUNG WALDINVENTUR UND FERNERKUNDUNG

Train a neural network for single tree object detection

This dataset comprises 20 RGB tiles and 16 LiDAR-derived CHM tiles at 10cm resolution with bounding box annotations for single tree detection. The tiles are sourced from National Ecological Observation Network (NEON) sites in the USA.
